

FabTime empowers all levels of the factory with immediate and comprehensive visibility into factory performance to drive improvements in real time.

The flexibility for users to modify reports on their own eliminates the manual, time-consuming tasks involved in report generation, and allows factory personnel to shift their focus towards driving improvements.

ADVANTAGES AT A GLANCE

- Consolidated reporting platform that provides **one source of truth** across diverse factory teams and corporate applications.
- Real-time automated data extraction and visualization enables **timely intervention to resolve issues and prevent downtime**.
- User-adaptive data visualizations, investigative tools, and alerting provide factory personnel with **actionable information**.
- Set up the report once, and it's always ready for use with no further configuration needed.

HOW IT WORKS

The Factory Digital Twin pulls a continuous feed of production data from multiple source systems and translates this data into usable, real-time information.

FabTime simplifies the complexity and volume of data coming in from the factory by condensing this information into ready-to-use, customizable reports. All FabTime reports are interactive and user-customizable, enabling users to utilize reports in their current state or modify them on demand to display the information needed in a given moment. With over 175 factory reports available, FabTime supports a wide range of applications for factory personnel across diverse teams and roles. Factory teams leverage FabTime for multiple purposes, including monitoring factory performance, conducting root cause analysis, driving morning meetings, and identifying areas for improvement.

User-Customizable Investigative Tool

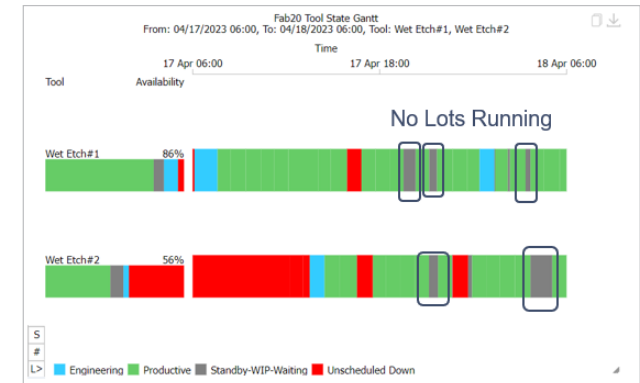

FabTime functions as a central repository for factory data, managing both real-time and historical information, while also making it easy for users to locate relevant data. Within just a few clicks, users can drill down into reports and define specific metrics and parameters to efficiently remove the root causes of problems.

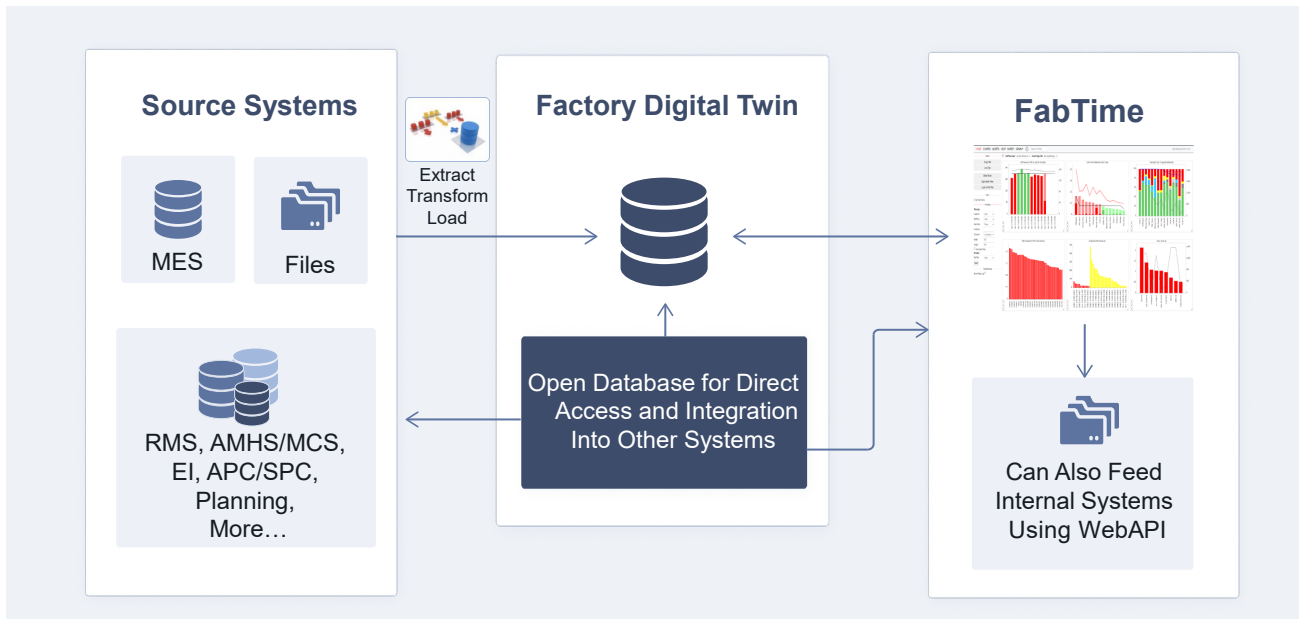

Shift from Reactive to Proactive Problem-Solving

CUSTOMIZABLE ALERTS NOTIFY DESIGNATED TEAM MEMBERS WHEN A SPECIFIC CONDITION OCCURRED IN THE FACTORY, FOR EXAMPLE WHEN LOTS ARE ON HOLD.

FEATURES

- 175+ industry-specific charts
- Customizable real-time alerting
- Filtering and drill-down
- 24/7 system monitoring
- Personalized technical support
- Regular updates and improvements
- Web-based access across multiple devices
- Live software training for end-users
- Admission to monthly user group meeting
