

Easy Rate Dual Sensor

INFICON Easy Rate dual crystal sensors minimize quartz crystal microbalance (QCM) total cost of ownership through low price and extended sensor life. This sensor minimizes production cost with the lowest initial investment and total cost of ownership. It is also designed to maximize availability through a long-lasting sensor that has less maintenance.

INFICON Easy Rate dual crystal sensors are designed and manufactured to provide a cost effective solution to high-accuracy thickness monitoring for short optical and batch coating processes.

Sensor Configurations

The INFICON Easy Rate Dual Sensor is available with standard or right angle orientations. The standard version is designed for installation from the side or bottom of the chamber having the cooling tubes parallel to the crystal face. The right angle version is designed for installation through the top of the vacuum system having the water cooling tubes perpendicular to the crystal face.

A pneumatically driven crystal shutter comes standard to protect the unused crystal during deposition, while the primary crystal monitors the deposition rate. The shutter is designed to move to the side, allowing for easy crystal replacement.

The front load design allows for easy insertion of the crystal holder in applications lacking sufficient room for side insertion. All Easy Rate Sensors are compatible with industry-standard 6 MHz crystals and feedthroughs and are designed for easy crystal changes while remaining rugged enough for even the most demanding depositions.

Feedthroughs

INFICON Easy Rate Sensors are offered with either a 2.54 cm (1 in.) Bolt Feedthrough or a CF40 (2.75 in.) ConFlat® flange feedthrough.

Feedthrough Connection

The sensor / feedthrough connection can be either welded onsite by the user or made with bored-through union fittings. These union fittings allow for easy adjustability without the need for brazing or welding. The length of the tubes can be cut to meet the needs of the chamber, allowing the length inside the vacuum system to be customized and the feedthrough to be attached easily and quickly. Alternately, if using a custom feedthrough or bending the sensor on site, no connection may be chosen for onsite welding.
